

1982 Thru 1992 Camaro Sequential System

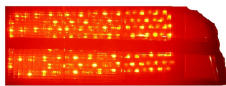

MSRP is \$285.95.

This system contains two boards. Each board contains 196 super bright 5mm red LEDs. This system contains only red LEDs due to the possibility of breaking local laws regarding difference color turn signal lights use at one time.

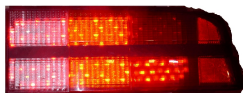

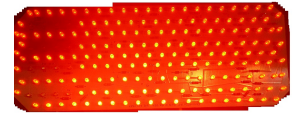

Only the upper section sequences. Both the upper and lower operate during brake and running light operation. However, when the turn signal is used, the upper section sequences.

The center yellow section will show as red. The clear reverse section will contain red LEDs. This section is not completely filled with red as in addition to the red LEDs, there are white LEDs when the reverse lights are used.
